

Cable tray partition equipment

Overview

Cable tray system dividers buy Partitions and dividers for cable support systems, cable trays and control cabinets. Strong brands, wide selection and fast.

Key Takeaways

Cable tray partition equipment, such as dividers and separators, is used to organize and separate cables within trays for safety, efficiency, and maintenance. Overview

Cable tray partition equipment is designed to segregate different types of cables—power, data, or instrumentation—within a single tray, preventing interference, reducing wear, and simplifying maintenance. These partitions can be fixed or adjustable and are compatible with various tray types, including wire mesh, ladder, and solid-bottom trays .

Types of Partition Equipment

- Tray Dividers: Vertical or horizontal panels that separate cables into distinct sections. For example, Kable Kontrol offers dividers compatible with wire mesh trays in widths of 4, 6, 8, and 12 inches .
- Adjustable Partitions: Resizable dividers that can be repositioned to accommodate changing cable layouts.
- Slot-Based Dividers: Integrated into trays with pre-drilled slots, allowing easy attachment of partitions and other accessories like tubing clamps .

Materials and Construction

Partition equipment is typically made from zinc-plated steel, stainless steel, aluminum, or fiberglass composites, depending on environmental conditions and load requirements . High-quality finishes, such as electro-zinc coating, provide corrosion resistance for indoor and outdoor installations.

Installation and Accessories

- Mounting Brackets: Cantilever, L-type, V-type, or reinforced brackets support partitions and trays .
- Splice Couplers and Hanger Kits: Ensure secure connections and suspension from ceilings or walls.
- Slot Patterns: Enable flexible positioning of dividers and easy access for cable ties or clamps .

Applications

Cable tray partition equipment is widely used in:

- Data centers and network closets for separating power and data cables.
- Industrial facilities to organize instrumentation and control wiring.
- Commercial buildings for structured cabling in offices, hospitals, and schools .

Design Considerations

When selecting partition equipment, consider:

- Tray width and depth to ensure partitions fit properly.
- Cable types and load to prevent overloading the tray.
- Future expansion by allowing extra space for additional cables .
- Environmental conditions to choose appropriate materials and finishes for corrosion protection. Using proper partition equipment improves cable management, safety, and maintenance efficiency, ensuring long-term reliability of electrical and data systems.
