

Fiber Optic Tray Multimode

Overview

LC-OM3 Multimode Fiber Enclosure Perfectly fits 19" racks and cabinets. Select from various connectors and lengths LC-OM3 12 Duplex Multimode 24 Port Rack.

Key Takeaways

A multimode fiber optic tray is a structured housing designed to organize, protect, and manage multimode fiber splices and terminations, typically in rack-mounted panels or enclosures. Overview

A fiber optic tray serves as a secure platform for splicing, terminating, and routing optical fibers. In multimode applications, these trays accommodate fibers such as OM3, OM4, or OM5, which are optimized for high-speed data transmission over short to medium distances. Trays are commonly integrated into rack-mounted panels or enclosures, providing organized access to multiple fiber connections while protecting them from bending, stress, and environmental damage .

Design and Features

- **Tray Style:** Many multimode trays use a sliding drawer or high-density polycarbonate tray design, allowing easy access for splicing and maintenance without disturbing other fibers .
- **Connector Compatibility:** Trays support LC, SC, or MTP/MPO connectors, with color-coded adapters to distinguish multimode (beige, aqua, violet) from singlemode (blue or green) fibers .
- **Splice Management:** Trays include splice holders or slots for fusion or mechanical splices, often accommodating 12–24 fibers per tray, depending on the panel size .

- **Rack Mounting:** Standard trays fit 1U or 2U 19-inch racks, enabling high-density deployment in data centers or enterprise networks .

- **Durability:** Constructed from steel and polycarbonate, trays are lightweight yet strong, often compliant with environmental and safety standards such as RoHS .

Performance Considerations

- **Insertion Loss and Return Loss:** High-quality multimode trays and pigtails are designed to minimize insertion loss and back reflection, ensuring reliable signal transmission .

- **Bend Radius Protection:** Trays maintain proper fiber bend radius to prevent signal degradation, which is critical for multimode fibers that are more sensitive to bending than singlemode fibers .

- **Scalability:** Modular trays allow expansion by adding additional splice trays or cassettes, supporting up to hundreds of fibers in a single enclosure .

Applications

- **Data Centers:** High-density multimode trays support fast Ethernet, 10G, 40G, and 100G networks.

- **Enterprise Networks:** Used for structured cabling in office buildings, campuses, and telecom rooms.

- **Telecommunications:** Protects fiber splices in central offices or outside plant enclosures.

Example Products

- **Excel 24-Way Multimode LC Patch Panel:** Sliding tray design, supports 48 fibers with color-coded adapters, 1U rack mount .

- **LC-OM3 24-Port Fiber Enclosure:** Includes 2 splice trays, 24-strand LC multimode pigtails, low insertion loss, fits 19" racks .

- **CommScope NG4access Panels:** Modular panels with interchangeable splice trays and adapter packs for multimode and singlemode fibers .

In summary, multimode fiber optic trays are essential for organized, high-performance fiber management, providing protection, accessibility, and scalability for modern network infrastructures. They are designed to accommodate various connector types, maintain fiber integrity, and support high-density deployments in data centers and enterprise environments.
