

Find the port from which the IP address comes from on the aggregation switch

Overview

This should give you the definitive information on which switch and port the IP address is connected to.

Key Takeaways

You can locate the port for a specific IP by first finding its MAC address via ARP, then tracing that MAC through the switch's MAC address table to identify the connected port.

Step-by-Step Process

1. Identify the MAC Address of the IP
 - Ping the target IP from a device on the same subnet to populate the ARP table.
 - On a Cisco switch or router, run `show ip arp` to find the MAC address associated with the IP.
 - On the aggregation switch, use the command `show mac address-table address`.
 - This will display the VLAN and the interface (port) where the MAC is learned.
2. Check the MAC Address Table
3. Trace Through Uplink Ports if Necessary
 - If the MAC appears on a trunk or uplink port, the device is connected downstream.
 - Use `show cdp neighbor` or `show lldp neighbors` to identify the next switch in the path.

- Log into the downstream switch and repeat the MAC lookup until you find the access port where the device is directly connected . 4. Verify the Port
- Once the MAC is found on an access port, you can confirm by checking the ARP table on that switch or by monitoring traffic on the port.
- Optionally, configure port descriptions to document the device for future reference .
Additional Tips
- Enable IP Device Tracking on Cisco switches to simplify future lookups: ip device tracking and ip device tracking probe delay 30 .
- For Layer 2 switches, you may need to consult the router performing Layer 3 routing to locate the MAC if the IP is on a different VLAN .
- Documenting the network topology helps reduce the number of switches you need to check when tracing devices . By following these steps, you can reliably determine the physical port on the aggregation switch where a device with a given IP address is connected.

How to trace end user connected from which L2 switch

This should give you the definitive information on which switch and port the IP address is connected to. By following

How to Find Which Switch Port a Device Is Plugged Into

There may be a time you'll need to track down which port has a certain device plugged into

How to Get Port Number from IP Address: A Step-by-Step Guide

In today's interconnected digital world, understanding how to retrieve a port number from an IP address is a valuable

Find the switch and port where a particular hostname, IP, or MAC ...

Suppose you need to find the switch and port where a particular hostname, IP, or MAC address is now or has been connected to

How to find the port a device is connected to, based on IP, on a Cisco ...

On a Cisco Catalyst switch, I need to find what port an end device is connected to. I have the IP address/host name. How do I

Solved: Trace network port

06-14-2013 02:52 AM If you ping the address and then do a "show arp" it will show you which port / VLAN it is in.

SoftPerfect Switch Port Mapper : network port identification tool

The SoftPerfect Switch Port Mapper tool works with managed network switches and reports what is connected to switch ports, and

How to Find Port from IP Address Juniper Switch

You have been given an IP address and want to find the port which the machine that owns that ip address is plugged into.

Cisco Catalyst - Find out What Port an IP Address is Plugged Into

Note: I knew that my device was a single device plugged into a port, but if you don't know this, there is a chance that the physical

Switch Ports from IP addresses : r/sysadmin

Finding switch ports for a list of IP addresses. We are using Extreme switches and I can find half of these by searching for the IP

Finding a port associated with an IP address

We are using a 6509 switch with native IOS. Is there a command to find the port to which a known IP is associated?

Solved: Trace network port

Solved: Hi, i have core switch 6509.I need to trace this server A is connected to which port in the Core Switch.I found

How to find port it connected to a switch using mac-address/ip add ...

On a Cisco switch, you can issue the "sh cam 00-0d-60-cb-44-5d" command. The output should tell you the VLAN

Is it possible to match an internal IP address to a switch port?

As others have mentioned, there is no direct way to determine what IP is connected to a certain switch port. The reason is that an

Technical Tip: How to find the interface's MAC address

Description This article describes how to find the interface's MAC address. Scope FortiGate. Solution From GUI: Go

Check all the active IP addresses on a switch

If the switches are all connected together, you may find the MAC address on a port which connects to a different

cisco

My colleague set up a static IP on a switch, but didn't tell me where and what port, is there a command to run that will

How to Find Port from IP Address Juniper Switch

You have been given an IP address and want to find the port which the machine that owns that ip address is plugged into.

How to find what port im connected to on a switch from my PC?

The only way to find out what port your PC is connected to is to ask the switch; the PC cannot know this because no

IP address of connected devices to switch ports

You can get to know the IP address of the host connected to any switch port by using the ARP table feature. Please

Find the switch and port where a particular hostname, IP, or MAC ...

Find the switch and port where a particular hostname, IP, or MAC address is or was connected Suppose you need to find the switch

Switch Ports

The MS switches support Link Aggregation (LACP) groups of up to 8 ports on the same switch or physical stack. A

Find a Device's IP Address on a Cisco Switch Port (Step-by-Step)

Learn how to map an IP address to a physical port on a Cisco switch using MAC and ARP tables, or a DHCP server.

How To Find IP Address Of A Client Connected To Switch ?

To determine the IP address, go to the Layer-3 device that your switch is connected to. In the Layer-3 device (mostly a router or layer
