

Fireproof sealant for cable tray openings

Overview

Service penetration seals are passive fire protection systems designed to maintain the fire resistance of building element or section - wall or floor - where services such as cables, cable trays, pipes or ventilation ducts pass through them. Avoid cable fires and stop them safely! KBS ® offers various solutions to effectively protect cable penetrations from the passage of flames and smoke. In most cases, the task is to seal off complex cable systems and cables on support constructions. However, individual cables and cable bundles as. Scope: Firestopping for busway, cable trays, cables, and trunking passing through walls in enclosed electrical installations. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with. AF BAGS are intumescent and ablative fireproof pillows certified under EN 1366-3 for sealing up to EI 240 of cable tray penetrations. * Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for each opening. UL Listed Systems Concrete Wall - C-AJ-4056 3 HR F-Rating, 3/4 HR T-Rating Gypsum. They ensure that openings in walls or floors for feeding through electrical, data, coaxial, and glass fibre cables as well as cable support constructions and electrical installation conduits can be sealed so that the fire resistance of the building element is restored. FIRSTO fire stops are developed as a modular system which is simple to assemble around the cable run against the wall or on the floor.
