

Gigabit optical module distance

Overview

SFP 1G LX Transceiver Guide: Specs, Distance & Compatibility SFP 1G LX modules operate at 1.25Gbps over a 1310nm wavelength and typically support up to 10km.

Key Takeaways

Gigabit optical modules can support distances ranging from a few meters to over 80 kilometers, depending on fiber type, wavelength, and module design.

Short-Range Modules (Multimode Fiber)

- 850nm SFP (SX): Optimized for multimode fiber, typically supports up to 550 meters over OM2 fiber and slightly longer on OM3/OM4 with 1 Gbps speeds .

- Limitations: Modal dispersion in multimode fibers restricts distance; higher data rates reduce maximum reach .

- Use cases: Campus networks, data center interconnects, and short intra-building links.

Medium-Range Modules (Single-Mode Fiber)

- 1310nm SFP (LX): Designed for single-mode fiber, supports up to 10 kilometers at gigabit speeds .

- Advantages: Single-mode fiber allows light to travel in a single path, reducing dispersion and enabling longer distances .

- Use cases: Campus backbones, metropolitan area networks.

Long-Range Modules (Single-Mode Fiber)

- 1550nm SFP (ZX): Supports up to 80 kilometers for long-haul links .

- Extended reach: With DWDM/CWDM and amplification, distances can exceed 200 kilometers in specialized deployments .

- Use cases: Long-haul telecommunications, inter-city fiber links.

Copper and Direct Attach Options

- RJ45 SFP: For 1 Gbps over Cat5e/Cat6 cables, limited to 100 meters.

- Direct Attach Copper (DAC) or Active Optical Cable (AOC): Short-range connections, typically ≤ 10 meters, used in data centers for server-to-switch links .

Key Factors Affecting Distance

- Fiber type: Single-mode fibers allow longer distances than multimode fibers .

- Wavelength: 850nm for short-range, 1310nm for medium, 1550nm for long-range .

- Optical power budget: Determines how far the signal can travel before attenuation causes errors .

- Installation quality: Connector cleanliness, splicing, and fiber bends can reduce effective distance .

In summary, gigabit optical modules offer multiple distance options, from a few meters with copper or short-range multimode SFPs, to tens of kilometers with single-mode SFPs, and even hundreds of kilometers with specialized long-haul optics. Choosing the right module depends on fiber type, wavelength, and deployment requirements.
