

How many secondary busbars are there in total

Overview

In electric power distribution, a busbar (also bus bar) is a metallic strip or bar, typically housed inside switchgear, panel boards, and busway enclosures for local high current power distribution, transmission, or switching substations. They are also used to connect high voltage equipment at electrical switchyards, and low-voltage equipment in battery banks. They are generally uninsulated, and h. Design and placementThe busbar's material composition and cross-sectional size determine the maximum current it can safely carry.
