

How to install AI server drivers

Overview

Download: Select and download the latest driver compatible with your GPU and operating system. Attach the Ubuntu ISO to your host server's virtual media. The guide was created with Ubuntu 20. 1 LTS, some options may change on newer versions of the installer. Configure the keyboard layout and press. This guide provides step-by-step instructions for installing CodeProject. It covers both standard installations and special configurations for GPU support and Windows Subsystem for Linux (WSL) environments. For Linux or macOS installation, see Linux/macOS. Ubuntu provides two driver types for NVIDIA GPUs: Unified Driver Architecture (UDA) for general desktop use and Enterprise Ready Drivers (ERD) for servers and computing tasks. inf and manifests) to trick the installer. The easiest way to get Ubuntu's installer is to download it on their website, and then use Balena Etcher to flash that onto a USB flash drive. On our Lenovo, you can do this by mashing the Enter key before it boots into Windows, but that's different on every. Before setting up your NVIDIA GPU for AI processing, it's crucial to confirm that your hardware is compatible and capable of handling AI workloads efficiently.
