

How to remove the yellow threads inside an optical fiber cable

Overview

It is common to use the wet-to-dry technique: Touch the fiber end down on a small wet zone of a fresh wipe, then drag once into a dry zone so the last point of contact is dry and residue is removed with it. Also known as optical fiber cable strippers, they hold cable within a slot, squeeze their jaws to press through the coating, and slide the coating off the end of the cable. Sharp-edged slots in the jaws. Cleaning is typically part of a workflow like inspect → clean (if needed) → inspect again → connect for connectors, or strip → clean → cleave → inspect → splice for bare fiber ends. Different types of tools can be used, which may be usable for bare fiber ends and/or connectors. With the above different items, you should. Cleaning Connectors There are several types of cleaners which can be used. Some are dry, some use cleaning solutions.
