

Jamaica Lightweight Cable Tray Specifications

Overview

Jamaican galvanized cable tray specifications All illustrations, descriptions and technical information included in this document are provided as indicatio.

Key Takeaways

Lightweight cable trays in Jamaica are available in wire mesh, perforated, and solid designs, typically made from galvanized steel, stainless steel, or powder-coated finishes, with standard lengths of 10 feet and customizable widths and depths. Materials and Construction

Lightweight cable trays in Jamaica are commonly manufactured from galvanized steel, stainless steel (304L or 316L), and powder-coated steel, providing durability, corrosion resistance, and compliance with industry standards . Wire mesh trays, such as the Cablofil system, feature “Safe-T-Edge” welded lateral wires to prevent cable fraying and protect installers from sharp edges . Perforated trays enhance airflow, reducing overheating risks and improving cable performance .

Dimensions and Configurations

Standard lengths are 10 feet, with widths ranging from 2 inches to 24 inches and depths from 1 inch to 6 inches . Large mesh sizes (e.g., 2" x 4") allow flexible cable routing, while side flanges prevent cables from falling off. Custom sizes are available upon request to suit specific project requirements .

Finishes and Coatings

Available finishes include electro-zinc, hot-dipped galvanized, stainless steel 304L/316L, black powder-coated, and custom painted colors . These finishes ensure resistance to environmental hazards, dust, and corrosion, making them suitable for both indoor and outdoor installations .

Installation Features

Lightweight cable trays are designed for easy installation, often requiring no screws or special tools. The FAS support system provides versatile profiles and brackets, reducing installation time . Smooth, rounded wire mesh minimizes dirt accumulation and facilitates maintenance . Perforated trays also improve airflow, enhancing cooling and preventing cable overheating .

Compliance and Standards

Cable trays in Jamaica adhere to industry safety standards, including CE marking and UL classifications where applicable . They are tested for mechanical strength, electrical safety, and durability under normal operating conditions .

Applications

These trays are suitable for commercial, industrial, and residential projects, providing organized cable management, enhanced safety, and optimized space utilization. They are ideal for power, data, and fiber optic cabling, ensuring long-term reliability and ease of maintenance .

Suppliers in Jamaica

- Anixter Jamaica: Offers Cablofil wire mesh trays with multiple finishes and sizes, shipping within Jamaica .
- Brilltech Engineers Pvt. Ltd.: Provides perforated and solid trays with installation support and system design assistance .
- CB Cabling Technologies Ltd: Supplies enterprise network cabling solutions including lightweight cable trays . These specifications ensure that lightweight cable trays in Jamaica meet both functional and regulatory requirements while providing flexibility for various installation environments.
