

Price of pre-buried optical cables for home use

Overview

Introducing our fiber optic outdoor pre-terminated cable, the ultimate solution for your outdoor connectivity needs.

Key Takeaways

Direct burial fiber optic cables for home use typically range from \$0.50 to \$2 per foot, depending on type, length, and pre-termination options.

- Standard direct burial fiber optic cable (unarmored, multimode, 150-500 feet) generally costs \$75-\$250 for a roll suitable for home installations .
- Armored or rodent-resistant cables designed for underground installation with steel reinforcement and heavy-duty jackets can cost \$1-\$2 per foot, with pre-terminated assemblies being more expensive due to factory testing and connectors .
- Longer runs (1,000 meters / ~3,280 feet) can cost \$500-\$1,200, depending on fiber type (OM1, OM2, OM3, or single-mode) and whether the cable is pre-terminated .

Factors Affecting Cost

- Cable Type: Single-mode fiber is generally more expensive than multimode fiber.
- Pre-Termination: Factory-terminated cables with LC or SC connectors reduce installation time but increase cost.
- Armoring and Protection: Armored cables with steel or rodent-resistant jackets are more durable but cost more.

- Length: Longer cables increase total cost, though bulk rolls often reduce per-foot pricing.

- Installation Considerations: Direct burial cables eliminate the need for conduit, saving on installation costs, but pre-terminated cables may require careful handling to avoid damage during burial .

Recommendations for Home Use

- For typical home installations (yard-to-house or between buildings), a 150–500 foot multimode direct burial cable is usually sufficient.

- Pre-terminated cables are convenient for plug-and-play setups but may be overkill for short runs.

- Ensure the cable is rated for outdoor and underground use, with UV and moisture resistance. Armored or rodent-resistant options are recommended if the cable will be buried in areas prone to pests or mechanical stress . By considering these factors, homeowners can select a cable that balances durability, ease of installation, and cost, typically spending \$100–\$400 for a complete underground fiber run suitable for home networking.
